

DISTRICT HEATING FAQ

KEY STATS

2%

of the UK's heating needs are met through heat networks

17,000

Heat networks in the UK (Approximate)

55%

of district heating schemes are based in London (2015 estimate)

0.7M TONNES

of carbon emissions in buildings reduced by heat networks each year

40%

of the world's CO2 emissions come from heat

2%

drop in heat-related CO2 emissions from 2019 expected for 2025

12,000GWH

of heat supplied annually to heat network customers in the UK

£3 BILLION

could be saved in national decarbonisation costs by using low carbon fuels (ETI estimate)
